

Bulk Material Handling Systems

Bulk solids like grain cereals, powder, food, plastic pellets can be conveyed with bulk solid handling systems. Pneumatic conveying, screw conveyors, bucket elevators are generally used for bulk material conveying. Depending on type of the application, some of these systems can be combined together. Bulk solids can be brought from basement, silo, truck, Bigbag, mixer and transferred again to basement, silo, truck, Bigbag, mixers. Batching, dosing and weighing tasks can be done in these systems.
